Where Control Rooms Matter Most

When decisions must be made in seconds, failure isn't an option. Reliable technology is even more essential than ever.

This is especially true in control rooms supporting:
- Emergency response
- Critical infrastructure
- Transport operations

In these high-pressure settings, operators are responsible for protecting lives and keeping essential services running. They must move between multiple systems instantly, without friction, delay, or cognitive overload.

ADDER
Where Control Rooms Matter Most
Emergency Response and Critical Infrastructure

Control rooms aren't just monitoring spaces.
They are command centres. That's where KVM technology plays a vital role.
Secure, real-time access to critical systems enables faster decision-making, reduces operator fatigue, and supports continuous operations when reliability is non-negotiable. In high-stakes control rooms, the infrastructure behind the screens is just as important as what's on them. Find out more about KVM in Control Rooms:

WE ARE DIREKT

Solutions for an all IP-infrastructure
WE ARE INTEROPERABILITY

The Direkt-series is designed from the ground up for managing, processing and output of IP-streams. Instead of using cloud services, which involve cost and increased management overheads, you can own and scale the functionality of the Direkt router to meet your needs. In the future, more functionality can be unleashed by remotely activating options.

With up to 12x SDI-out, you can easily integrate the Direkt router into your current SDI-based infrastructure while at the same time seamlessly migrating to an "all-IP infrastructure.

We believe that interoperability is one of the critical issues facing anyone working in the broadcast industry.

Having a flexible and versatile workflow is key and we aim to give our customers just that.

According to Feedmagazine.tv autumn 2021 issue these are the top challenges that broadcasters are currently facing.
1. Transition to IP
2. Enabling remote collaboration
3. Reducing broadcast latency

To help with multi-vendor interoperability we've added support for multiple open source protocols, including: SRT, RIST, RTP, RTP+fec, UDP, TCP, RTMP, HLS and RTSP.

IDM (Intinor Direkt Management), is more than just remote management, it is 24/7 monitoring and a tool to troubleshoot IP-issues you don't want to miss once used. Intinor's free API rounds off the end-to-end solution offering unlimited possibilities to integrate into existing IP environments or even allow your own customized workflows.

Unlock the Value of Video

Reliable	Scalable	Secure	Complete
Enjoy CDN-supported 99.9% uptime and responsive support.	Access a range of adaptive streaming workflows, including ultra-low latency streaming at scale.	Benefit from a range of security features, including DRM capabilities, from a SOC 2, Type 2 certified company.	Experience a full suite of features from advanced analytics to best-in-class player.

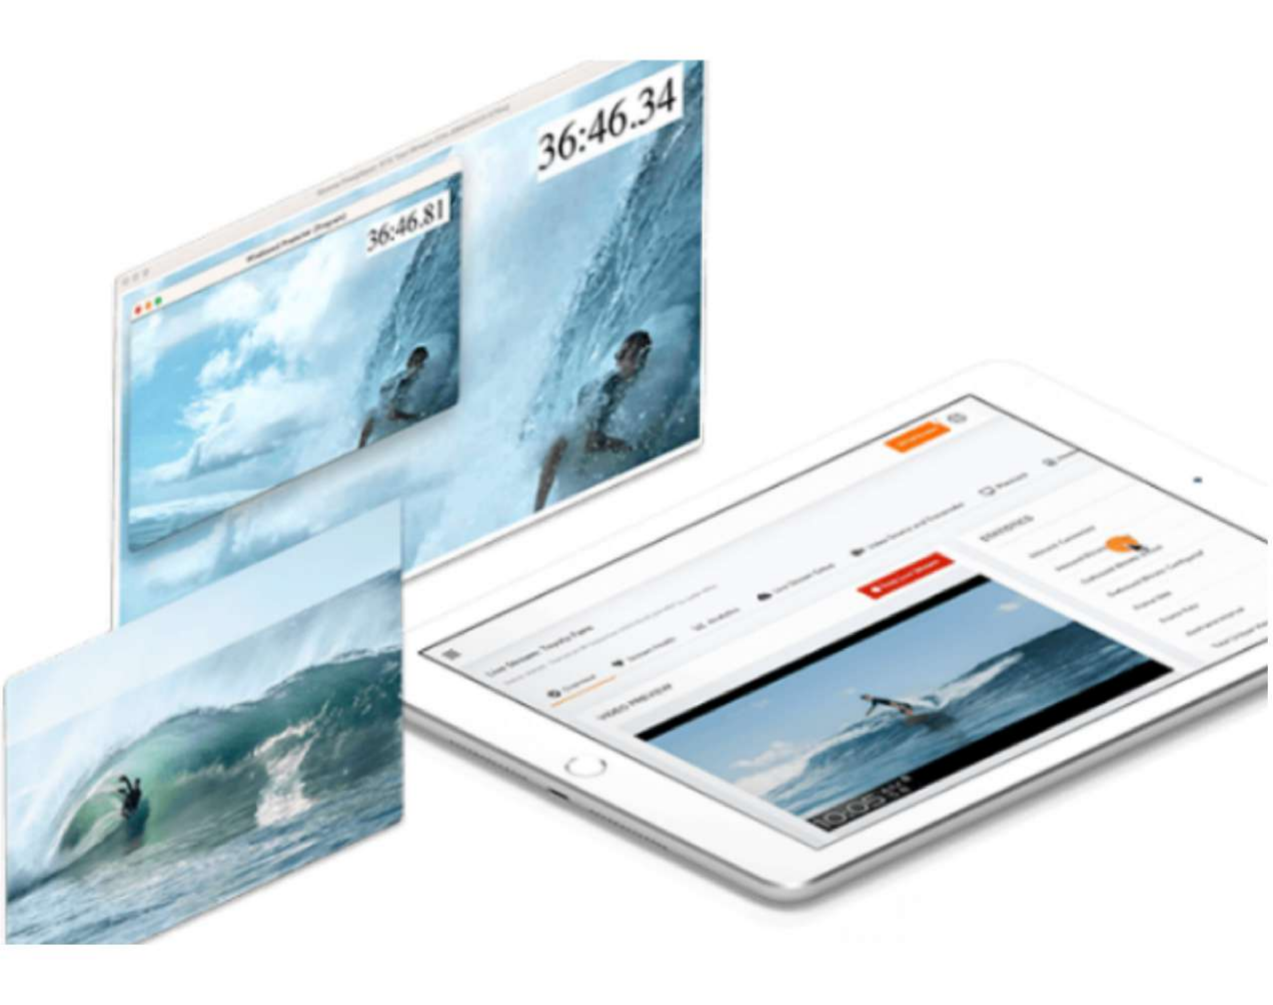
Wowza Video Highlights

VOD, Live, or Both
Wowza's unparalleled live streaming and video on demand (VOD) capabilities power any business use case.

- Complete delivery from ingest through playback
- Transcoding for optimal viewer experience
- Reliable and secure asset management and delivery

Content Management System
Keep track of your own content and promote a smoother customer experience with Wowza's sophisticated CMS.

- Streamlined storage and management of large content libraries
- Fully integrated live recording for live-to-VOD workflows
- Flexible metadata for nuanced discoverability



Best-in-Class HTML 5 Video Player
Deliver a stunning and user-friendly experience to viewers on any device with Wowza Flowplayer.

- Sophisticated features including DRM and in-depth analytics
- Comprehensive SDKs and APIs for unparalleled customizability
- Pre-integrated with WebRTC for real-time and interactive streaming

PCIe and USB Modulators for All Major Digital-TV Standards

A complete range of modulators supporting virtually all digital-TV standards worldwide. Built on a fully digital architecture and advanced SDR techniques, they deliver exceptional signal quality and support advanced use cases such as GPS signal simulation and ATSC 3.0 MIMO.

DTU-315
All-Standard 0-2GHz Modulator for USB-3

Portable modulator for satellite, terrestrial and cable, all in a single device. The DTU-315 is bus-powered, so no power supply is required. A good fit for laptop or tablet, but convenient for use with desktop- and server PCs too.

DTA-2116
All-Standard 0-3GHz Modulator for PCIe

Experience DekTec's cutting-edge, all-digital modulator, generating a wide range of cable, satellite or terrestrial standards, or even your own software-defined RF signal. Ideal for digital TV testing, SFN deployment, GPS/GNSS emulation, and beyond.

PTZ Control

Our PTZ controllers are made with the operator in mind! It's Danish design made from a deep understanding of the needs for the PTZ operator. We have created a series of premium surfaces that will follow you for years.

PTZ Extreme

The ultimate tactile controller for PTZ cameras and robotic systems of different brands such as Panasonic, Sony, Canon, BirdDog, JVC, PTZ Optics, Lumens, Bolin, AIDA, Vizrt... and more.
The Unique SKAARHOJ Blue Pill operating system allows the detailed control of multiple cameras from different brands.

PTZ Pro

PTZ Pro offers the ideal middle ground between PTZ Fly and PTZ Extreme, delivering enhanced control for live productions, talk shows, concerts, houses of worship, and more. With dedicated sections for PTZ presets, camera exposure, and shading control, this professional controller speeds
up workflows while offering complete customizability and intuitive plug-and-play functionality for seamless operation across multiple camera brands.

PTZ Fly

PTZ Fly is your compact and versatile companion for controlling PTZ cameras and more. Whether you're operating Panasonic, Sony, Canon, Birddog or any other leading camera brands, PTZ Fly gives you unmatched control over multiple cameras simultaneously. Beyond cameras, it integrates with an expanding library of devices, providing unparalleled flexibility for live production environments, lecture facilities, houses of worship, corporate events and more.
